

TECHNICAL REPORT

**Osteological Preparation of a California Sea Lion.**

S. Macdonald and K. Kroll

*A California sea lion (*Zalophus californianus*) was donated to the University of Bristol from Longleat Safari Park to be used as a teaching aid for the veterinary students. This paper describes the methods by which the sea lion was prepared and assembled to enable us to use it in the Centre for Applied Anatomy's veterinary museum for comparison to the other mammals on display.*

***Keywords: Sea lion, Osteology, skeleton, articulation, maceration***
